Industrial and Process

PGI Series

- 40, 50, 63, 100, 115, and 160 mm (1 1/2, 2, 2 1/2, 4, 4 1/2 and 6 in.) dial sizes
- Accuracy in accordance with ASME, EN, and JIS
- Available with a variety of end connections, including Swagelok® tube adapters
- Center-back, lower-back, and lower mount configurations
- Stainless steel and reinforced thermoplastic construction
- Available unfilled or liquid filled

Testing and Calibration

Every Swagelok industrial pressure gauge is factory calibrated and pressure tested.

Features

- Monitor vacuum and positive system pressures up to 15 000 psi, 1000 bar, or 100 MPa
- Manufactured in accordance with industry standards
- Available with Swagelok tube adapter end connections

Swagelok Tube Adapters Solve Alignment Problems

Swagelok tube adapters can help eliminate difficult alignment problems and can be used with any Swagelok tube fitting.

Typical Alignment Problem

When installing a gauge with a pipe fitting end connection, it is often difficult to align the dial to the desired position without damaging the gauge.

Swagelok Tube Adapters

Gauges with integral Swagelok tube adapters eliminate alignment problems.

Installation Instructions

1. Insert the gauge with integral Swagelok tube adapter into a Swagelok tube fitting.
2. Align the gauge dial to the desired position.
3. Install the fitting.

⚠ **Swagelok tube adapters are to be used ONLY in Swagelok tube fittings. Use in fittings made by other manufacturers may result in leakage or slippage.**

B Model: General-Purpose Stainless Steel Gauge

Features

- 63, 100, and 160 mm (2 1/2, 4, and 6 in.) dial sizes are available.
- Bayonet ring allows easy access to pointer.
- Lens is constructed of polycarbonate for additional protection.
- Design is liquid fillable.

Dial Range Designators

Digital gauges can be run up to 100% of span. Customers should select a pressure range close to the system operating range to get the best possible accuracy.

Maximum pressure is limited by the end connection and materials of construction of wetted components.

Not all dial ranges and end connections are available on all models.

Dial Range Designators

Digital gauges can be run up to 100% of span. Customers should select a pressure range close to the system operating range to get the best possible accuracy.

Maximum pressure is limited by the end connection and materials of construction of wetted components.

Not all dial ranges and end connections are available on all models.

E Model: General-Purpose Stainless Steel Gauge

Features

- 63 and 100 mm (2 1/2 and 4 in.) dial sizes are available
- Bayonet ring allows easy access to pointer.
- Lens is constructed of clear polycarbonate.
- Design is liquid fillable.

Technical Data

Dial Ranges

Compound Gauges

- Vacuum to 0 psi through vacuum to 200 psi
- Vacuum to 0 bar through vacuum to 9 bar
- Vacuum to 0 MPa through vacuum to 1.5 MPa

Positive-Pressure Gauges

- 0 to 15 psi through 0 to 15 000 psi
- 0 to 1 bar through 0 to 1000 bar
- 0 to 0.1 MPa through 0 to 100 MPa

Accuracy

- 63 mm (2 1/2 in.):
± 1.5 % of span (ASME B40.100 Grade B, EN 837-1 Class 1.6, JIS B7505 Class 1.6)
- 100 mm (4 in.):
± 1.0 % of span (ASME B40.100 Grade 1A, EN 837-1 Class 1.0, JIS B7505 Class 1.0)

Configurations

- 63 mm (2 1/2 in.):

P Model: Reinforced Thermoplastic Industrial Process Gauge

Features

- 115 and 160 mm (4 1/2 and 6 in.) dial sizes are available.
- Solid front and blowout back for severe service.
- Design meets safety requirements of ASME B40.100.
- Adjustable pointer is standard.
- Threaded cover ring allows easy access to pointer.
- Lens is constructed of clear acrylic plastic.
- Design is liquid fillable.

Dial Range Designators

The selected dial range should be approximately two times the system working pressure, and the system working pressure should be in the middle half (25 to 75 %) of the dial range. Contact your authorized Swagelok representative if the system working pressure will exceed 75 % of the dial range.

Maximum pressure is limited by the end connection and materials of construction of wetted components.

Not all dial ranges and end connections are available on all models.

Options and Accessories

Factory-installed options are specified in gauge ordering numbers, as shown in **Ordering Information** for each gauge model. Some items are available only as factory-installed options; others are available for field installation, as described below.

Adjustable Pointers

Gauges are available with adjustable pointers that allow resetting to zero. Adjustable pointers are standard for all P model gauges and are optional for B and S model gauges.

Orifices

Orifices are used to restrict flow, reducing the immediate effect of pulsations and pressure spikes. All Swagelok industrial and process gauges are available with orifices as factory-installed options.

Threaded orifices (0.023 in. [0.58 mm] inside diameter) are available for P model industrial process gauges as accessories for field installation.

P Model Threaded Orifice Kits

Orifice Material	Ordering Number
Stainless steel	PGI-P-ORIFICE
Brass	PGI-P-ORIFICE-Q
Alloy 400	PGI-P-ORIFICE-R

Special Cleaning

Special cleaning is available as an option for unfilled gauges. Internal components are cleaned in accordance with ASME B40.100, Section IV, which states that the gauge shall be free of visually detectable moisture and foreign matter (chips, slivers, weld slag or splatter, shop soil, greases, oils, or other contaminants) that could be mechanically detrimental to proper function of the gauge. The gauge is then capped and bagged to maintain cleanliness.

Certificates of Calibration

This option provides the user with a calibration sheet and a serial-numbered gauge that has been calibrated with a gauge traceable to DKD for gauges manufactured in Germany or to NIST for gauges manufactured in the U.S. Certificates of calibration are available for all Swagelok gauges.

Material Certifications

This option provides the user with a General Material Certificate of Compliance, EN 10204 2.2, stating that the gauges were manufactured from material purchased and certified as being in accordance with the specifications listed in this catalog. Material certifications are available for B, C, F, S, M, and L model gauges.

Liquid Fill

Liquid-filled gauges enhance the reliability and integrity of the measuring system for long periods under extreme operating conditions by dampening vibration and lubricating the gauge movement. B, C, F, S, and P model gauges are available liquid filled.

Because the type of liquid used to fill the gauge may vary with the application, Swagelok offers glycerin, low-temperature glycerin, and silicone. It is important to choose the proper fill liquid based on the operating temperature and pressure.

Ambient Operating Temperature

Temperature °F (°C)	Fill Fluid
-40 to 140 (-40 to 60)	Unfilled
-4 to 140 (-20 to 60)	Glycerin
-4 to 140 (-20 to 60)	Glycerin/Water (86.5/13.5%)
-40 to 140 (-40 to 60)	Silicone

Operating Pressure (Dial Range)

Case size 2 in and 2-1/2 in:

If the selected pressure range is ≤ 60 psi (4 bar, 0.4 MPa) or equivalent, liquid filled gauges must use with Glycerin/Water or Silicone Oil to ensure fastest response time and accuracy.

Case size 4 in and 6 in:

If the selected pressure range is ≤ 36 psi (2.5 bar, 0.25 MPa) or equivalent, liquid filled gauges must use with Glycerin/Water or Silicone Oil to ensure fastest response time and accuracy.

In addition, if a maximum indicating pointer is selected in a liquid filled gauge, the fill fluid should be Glycerin/Water or Silicone Oil. This requirement is independent of the pressure range or case size.

⚠ Glycerin- and silicone-filled gauges cannot be used where strong oxidizing agents are present.

Glycerin and low-temperature glycerin fill liquid are available as accessories for field installation.

Fill Liquid	Size	Ordering Number

Options and Accessories

Panel-Mount Clamps

Stainless steel panel-mount clamps are available for flush mounting Swagelok industrial gauges. The panel-mount clamp is easily installed on the gauge. This option is not available on lower mount or S model gauges. Panel-mount clamps on M model gauges must be factory installed and are available as accessories for field installation on A, B, C, F, L, and P model gauges.

Panel-Mount Clamp Kits

F model 100 mm (4 in.) size	PGI-100F-PMC

Front Flanges

Polished stainless steel front flanges are available for flush panel mounting of Swagelok industrial gauges. This option is not available on lower mount or P model gauges and must be factory installed on C and M model gauges.

Gauge Size	Ordering Number
63 mm (2 1/2 in.)	PGI-63SBL-FF
100 mm (4 in.)	PGI-100SBL-FF

Rear Flanges

Stainless steel rear flanges are available for mounting on the front of the panel. This option is not available on M, S, and P model gauges. Rear flanges are available factory installed on A, B, C, and F model gauges and as accessories for field installation.

A, B, C, and F Model Rear Flange Kits

Gauge Size	Ordering Number
63 mm (2 1/2 in.)	PGI-63BCL-RF

Maximum Indicating Pointers

Maximum indicating pointers (MIP), available for S, B, C, L, and P models, identify pressure spikes in a system and are helpful during system startup and troubleshooting. The MIP adds an additional 1 % error to the gauge because of the increased load on the bourdon tube. This option must be factory installed on A and C model gauges and is available for field installation on S, B, L, and P model gauges.

Maximum Indicating Pointer Kits

Gauge Model	Ordering Number
S, B, and L 63 mm (2 1/2 in.) size	PGI-63-MIP-SG
S, B, and L 100 mm (4 in.) size	PGI-100-MIP-SG
P 115 mm (4 1/2 in.) size	PGI-P-115-MIP-A

Options and Accessories

Gauge Faces for Low Light Environments

Illumination options, combined with larger numerals on the dial face, offer improved visibility in low light environments. Possible applications include: low light plant interiors, limited access areas, behind machinery and ductwork, areas where steam may inhibit visibility, and outdoor areas requiring gauge reading from a distance. These face options are available on all C Model, P Model, gauges and thermometers.

Option 1

Option 1 includes a retro-reflective material affixed to the dial face. The fluorescent color absorbs non-visible UL light, reflecting additional light and making the gauge more visible.

Option 2

Option 2 includes a retro-reflective, photo-luminescent dial design that illuminates the entire front of the instrument dial for an extended amount of time after exposure to a light source for as little as 10 seconds. The appearance of the dial face is white when not illuminated.

Gauge Faces

Gauge Face	Ordering Number

Orange (Option 1)	9321
Green (Option 1)	9322
Glow (Option 2)	9323

Options and Accessories

Coil Steam Siphons

Siphons protect pressure instruments in live steam service or other high-temperature vapor applications. The vapor condenses inside the coil of the siphon, preventing the high-temperature vapors from reaching the sensing element of the pressure instrument. Siphons are available in carbon and stainless steel.

Positionable Gauge Adapters

Features

- Positionable gauge adapter allows 360° orientation of pressure gauges.
- Inlet connection is 1/2 in. male NPT.
- Available with 1/2 in. NPT and ISO parallel gauge connections.
- All 316 stainless steel construction.
- Optional gauge siphon/snubber helps protect the instrument from steam and vapor and dampens pressure fluctuations.

Snubber Fittings—Gauge Protectors

Swagelok snubber fittings protect gauges and instruments from system pressure surges and shocks. Pressure damping (snubbing) is accomplished through the use of a porous sintered 316 stainless steel element.

Installing a Swagelok snubber fitting upstream from the gauge reduces the gauge's response rate. The response rate generally varies with the initial pressure drop across the porous element of the snubber fitting and allows the gauge to reach line pressure smoothly.

Snubber fittings should be used only to protect against pressure shocks, impulses, and surges. Systems requiring control of contaminants should use filters suited to the application. Refer to Swagelok *Filters* catalog, [MS-01-92](#).

Elements

With five basic elements available, snubber fittings can meet the requirements of fluid applications ranging from light gases to liquids with viscosities above 1000 SUS (Saybolt universal seconds) (220 cSt [mm²/s]). Element designators are stamped on all fittings for proper identification.

Fluid	Average Fluid Flow Estimate L/min ^①	Element Designator
Light gases from 69 to 79 SUS (13 to 16 cSt [mm ² /s])	0.05 at 25 psig (1.72 bar)	G
Air-steam from 75 to 119 SUS (15 to 25 cSt [mm ² /s])	2.4 at 25 psig (1.72 bar)	A
Water, light oils from 75 to 250 SUS (15 to 54 cSt [mm ² /s])	3.3 at 25 psig (1.72 bar)	W
Oils from 250 to 1000 SUS (54 to 220 cSt [mm ² /s])	1.3 at 10 psig (0.68 bar)	L
Oils of 1000 SUS (220 cSt [mm ² /s]) and above	0.9 at 10 psig (0.68 bar)	H ^②

^① Product is tested with air at ambient temperature. Flow estimate is the average air flow multiplied by a ratio of nominal kinematic viscosities (air/fluid).

^② Not available for ordering number -4-SRA-2.
